Two historical types. Two basic types of false position method can be distinguished historically, simple false position and double false position. Simple false position is aimed at solving problems involving direct proportion. Such problems can be written algebraically in the form: determine x such that $ax = b$, if a and b are known. The method begins by using a test input value x_0 , and finding ...

The negative real numbers can be discarded, and infinity introduced, leading to the set $[0, \infty]$, where division by zero can be naturally defined as $a/0 = \infty$ for positive a . While this makes division defined in more cases than usual, subtraction is instead left undefined in many cases, because there are no negative numbers.
