CO₂, which is then stored and used through cellular respiration. Calvin Cycle Process (Most Common C): 3
1. The enzyme Rubisco incorporates Carbon Dioxide into a five carbon sugar (RuBP) which creates a 6-carbon intermediate. 2. The 6-carbon intermediate splits into two 3-carbon molecules which are used to create glucose and other sugars.

Cellular Respiration Study Guide And Test Review PDF Download

Cellular Respiration. Animals metabolize food through a process known as cellular respiration. Cellular respiration is a catabolic process. That is, a food is broken down in order to release energy. How an organism utilizes food for energy is known as their metabolism. Enzymes are needed in order for animals to make the process energy efficient.

Explain what the equation of cellular respiration means. A six • carbon sugar (such as glucose) and oxygen, the reactants, enter the mitochondrion for the processes of cellular respiration.

4.4 Study Guide Overview of Cellular Respiration Worksheet KEY

1. Why are mitochondria called the powerhouse of the cell? They release energy for the cell 2. What cell process occurs in the mitochondria? Cellular Respiration 3. Why do some cells have MORE mitochondria? Give an example. The more active a cell, the more mitochondria it will have. Muscle cells probably have more mitochondria than a skin cell. 4.

Respiration & Fermentation Summary & Study Guide KEY

9. What is the purpose for cellular respiration in cells? What types of organism perform cellular respiration? MAKES ATP!!!! All living things need ATP for cell energy. 10. What does ATP stand for? Why is it so important for all living things? Adenosine Triphosphate. This is the energy molecule in all living things 11.
