The calibration of a soil sample is presented as a case study to illustrate the applicability of the method when the soil response lies within the linear elastic domain. Calibration results show a probabilistic description of the spatially distributed parameters and of the coefficients of the chaos representation that defines it.

Preparing Students for Writing in Civil Engineering Practice Abstract This paper describes a project designed to investigate characteristics of effective writing in civil engineering practice and improve writing instruction for students. The project analyzes documents written by civil engineering practitioners and compares them to papers written by

How could the abstract be improved? The first and most important requirement is to have a good understanding of the subject matter and the aims of the experiment. Note that the purpose of these tests is primarily to demonstrate how abstract theory actually works and this is not really addressed in the example abstract. Language has to be more precise.

b) Abstract: This should summarize, in about 200-300 words, the contents of the report, and enable the reader to decide whether the report is within his or her field of interest. The abstract cannot be considered as a part of the main report, in the sense that you cannot skip items just because you have mentioned them in the abstract.

The abstract concludes with what was achieved and ties back to the introduction. The purpose of the project is clearly stated. The authors provide clarification to the term "two-stroke engines" so that readers without technical experience will understand the significance of the statement.
