In mathematics, an embedding (or imbedding) is one instance of some mathematical structure contained within another instance, such as a group that is a subgroup.. When some object  $X$  is said to be embedded in another object  $Y$ , the embedding is given by some injective and structure-preserving map  $f : X \rightarrow Y$ . The precise meaning of "structure-preserving" depends on the kind of mathematical ...

A tooth (plural teeth) is a hard, calcified structure found in the jaws (or mouths) of many vertebrates and used to break down food. Some animals, particularly carnivores, also use teeth for hunting or for defensive purposes. The roots of teeth are covered by gums. Teeth are not made of bone, but rather of multiple tissues of varying density and hardness.
