To Err Is Human asserts that the problem is not bad people in health care--it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care.

To Err Is Human: Building a Safer Health System | The

This report lays out a comprehensive strategy by which government, health care providers, industry, and consumers can reduce preventable medical errors. Concluding that the know-how already exists to prevent many of these mistakes, the report sets as a minimum goal a 50 percent reduction in errors over the next five years.

To Err is Human: Building A Safer Health System : Health

Strategy for Improvement To achieve a better safety record, the report recommends a four-tiered approach: â€¢ Establishing a national focus to create leadership, research, tools, and protocols to enhance the knowledge base about safety.

362 Attitudes, Attributions and Social Cognition above may reveal negative attitudes towards immigrants in their behaviour, their self-reports may appear more positive because they are reluctant to seem prejudiced.

Attitudes, Attributions and 17 Social Cognition

Introduction. Two Institute of Medicine (IOM) reports have recommended the use of information technologies to improve patient safety and reduce errors in health care 1,2. Broadly speaking, health information technology (HIT) is the overarching term applied to various information and communication technologies used to collect, transmit, display, or store patient data.

Defining Health Information Technology-related Errors: New

Abstract. Under-recognised and untreated depression and anxiety symptoms have deleterious effects on physical functioning and social interaction increasing fatigue and healthcare utilisation in patients with chronic obstructive pulmonary disease (COPD).
