M. Karimi et al. / Journal of Molecular Catalysis B: Enzymatic 104 (2014) 48–55 The mass ratio of immobilized inulinase on the particles represents the enzyme loading capacity (ELC) [9]. However, ELC of inulinase can be defined in two ways; as the units of enzyme and mg of protein loaded per gram of the supporting agents. 2.2.3.

Since the scopes of the Elsevier journals Molecular Catalysis, Applied Catalysis A: General, Applied Catalysis B: Environmental, and Catalysis Communications are complementary, an appropriate submission to each journal could be borderline, in which case the advice of another Editor will be sought, possibly redirecting the submission to either Applied Catalysis A: General, Applied Catalysis B: Environmental, or Catalysis Communications (for letters) with the author(s)'s agreement.

A greater understanding of how co-solutes influence CALB and its immobilization is therefore needed.
