Work, Kinetic Energy and Potential Energy 6.1 The Important Stuff 6.1.1 Kinetic Energy For an object with mass m and speed v , the kinetic energy is defined as $K = \frac{1}{2}mv^2$ (6.1) Kinetic energy is a scalar (it has magnitude but no direction); it is always a positive number; and it has SI units of $\text{kg} \cdot \text{m}^2/\text{s}^2$. This new combination of the basic ...

Explain that gravity is the force that converts the ball's potential energy to kinetic energy; when it hits the pavement, it possesses potential energy for an instant, and then the force of the ground converts it to kinetic again as it bounces upward.

Kinetic and Potential Energy - Described and Captioned

Kinetic energy is energy possessed by a body by virtue of its movement. Potential energy is the energy possessed by a body by virtue of its position or state. While kinetic energy of an object is relative to the state of other objects in its environment, potential energy is completely independent of its environment.
