In electronics, emitter-coupled logic (ECL) is a high-speed integrated circuit bipolar transistor logic family. ECL uses an overdriven BJT differential amplifier with single-ended input and limited emitter current to avoid the saturated (fully on) region of operation and its slow turn-off behavior. As the current is steered between two legs of an emitter-coupled pair, ECL is sometimes called ...

Preface . This book is intended for use in the core electronics courses for undergraduate electrical and computer engineering majors. The book frequently takes the designer's point of view in discussing circuits, illustrates design with numerous examples, shows how to test circuit designs using SPICE, and provides numerous open-ended design problems with which students can practice.

Quando all'elettrodo di gate viene imposta una tensione negativa rispetto all'elettrodo di substrato, generalmente posto a massa, le lacune del substrato si accumulano in un piccolo strato in prossimità del gate, e non consentono il passaggio di corrente tra D e S (causa l'elevata ricombinazione).. Svuotamento. Quando all'elettrodo di gate viene imposta una tensione positiva rispetto all ...
