In geometry, an isosceles triangle is a triangle that has two sides of equal length. Sometimes it is specified as having exactly two sides of equal length, and sometimes as having at least two sides of equal length, the latter version thus including the equilateral triangle as a special case. Examples of isosceles triangles include the isosceles right triangle, the golden triangle, and the ...

A Pythagorean triple consists of three positive integers  $a$ ,  $b$ , and  $c$ , such that  $a^2 + b^2 = c^2$ . Such a triple is commonly written  $(a, b, c)$ , and a well-known example is  $(3, 4, 5)$ . If  $(a, b, c)$  is a Pythagorean triple, then so is  $(ka, kb, kc)$  for any positive integer  $k$ . A primitive Pythagorean triple is one in which  $a$ ,  $b$  and  $c$  are coprime (that is, they have no common divisor larger than 1).

Section 8: Concepts of Disease Occurrence. A critical premise of epidemiology is that disease and other health events do not occur randomly in a population, but are more likely to occur in some members of the population than others because of risk factors that may not be distributed randomly in the population.
