3. Do an activity to show that electrons and protons attract each other. Students can see evidence of the charges of protons and electrons by doing an activity with static electricity. Note: When two materials are rubbed together in a static electricity activity, one material tends to lose electrons while the other material tends to gain electron.

Element Practice Atomic Symbol " a short hand way of writing each elements name. 2 . He . 4 . Atomic Mass " The weight of an element. . Atomic Number " Represents both the number of protons and electrons in an element. Most of the mass comes from the neutron and proton. To find the number of neutrons, subtract the atomic weight from the atomic mass.

Welcome to It's Elemental - Element Math Game! The computer will randomly pick an element and present you with that element's data from the Periodic Table of Elements. Use that information to answer the question that the computer asks about the number of protons, neutrons, electrons or nucleons (particles in the nucleus) that an atom of that element contains.

When you compare the masses of electrons, protons, and neutrons, what you find is that electrons have an extremely small mass, compared to either protons or neutrons. On the other hand, the masses of protons and neutrons are fairly similar, although technically, the mass of a neutron is slightly larger than the mass of a proton.

For example, a neutral chlorine atom has 17 protons and 17 electrons, whereas a Cl⁻ anion has 17 protons and 18 electrons for a total charge of -1. All atoms of a given element are not necessarily identical, however, as the number of neutrons may vary to form different isotopes, and energy levels may differ forming different nuclear isomers.
