

section 1 the circulatory pdf

The circulatory system, also called the cardiovascular system or the vascular system, is an organ system that permits blood to circulate and transport nutrients (such as amino acids and electrolytes), oxygen, carbon dioxide, hormones, and blood cells to and from the cells in the body to provide nourishment and help in fighting diseases, stabilize temperature and pH, and maintain homeostasis.

Circulatory system - Wikipedia

In transfusion medicine, transfusion associated circulatory overload (TACO) is a transfusion reaction (an adverse effect of blood transfusion) that occurs due to a rapid transfusion of a large volume of blood.. There is still no single agreed reporting definition for TACO. The International Society of Blood Transfusion (ISBT) working party on hemovigilance in collaboration with the ...

What is high blood pressure? Blood pressure is a measure of how hard the blood pushes against the walls of your arteries as it moves through your body. It's normal for blood pressure to go up and down throughout the day, but if it stays up, you have high blood pressure. Another name for high blood ...
