Fundamental Probability and Statistics

Statistics is a branch of mathematics dealing with data collection, organization, analysis, interpretation and presentation. In applying statistics to, for example, a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model process to be studied. Populations can be diverse topics such as "all people living in a country" or ...

Assume that a procedure yields a binomial distribution with a trial repeated n times. Use the binomial probability formula to find the probability of x successes given the probability p of success on a single trial.

Welcome! Random is a website devoted to probability, mathematical statistics, and stochastic processes, and is intended for teachers and students of these subjects. The site consists of an integrated set of components that includes expository text, interactive web apps, data sets, biographical sketches, and an object library.

Since $\rho = 0$, R_p can be simplified to R , or where s^2 denotes the sample variance. Filliben [9, 10] suggested plotting the $\{Y_i\}$ against $\{C_i\}$ where C_i is the median of the i th order statistic in samples from the standard normal distribution.

Normal Probability Plots and Tests for Normality

Statistics is often a requirement for majors in business, engineering, medicine, math and science. As the study, analysis and presentation of data, Statistics provides an essential building block for future success in school and in the job market.

The Mann-Whitney U test is essentially an alternative form of the Wilcoxon Rank-Sum test for independent samples and is completely equivalent. Define the following test statistics for samples 1 and 2 where n_1 is the size of sample 1 and n_2 is the size of sample 2, and R_1 is the adjusted rank sum for sample 1 and R_2 is the adjusted rank sum of sample 2. It doesn't matter which sample is ...

The Friedman test is a non-parametric alternative to ANOVA with repeated measures. No normality assumption is required. The test is similar to the Kruskal-Wallis Test. We will use the terminology from Kruskal-Wallis Test and Two Factor ANOVA without Replication. Property 1: Define the test statistic. where k = the number of groups (treatments), n = the number of subjects, R_j is the sum of the ...
