shortest hub if the kart feels tight at the exit of the corner and use the longest hub when the kart feels loose at the exit of the corner. 3.3: Rear Track For American sprint racing, most rules dictate a maximum rear track of 50.0 inches. Because Tonykarts are raced primarily in Europe, they are designed for rules allowing a 55.0 inch rear track.

For sprint racing, most rules dictate a maximum rear track of either 1350 or 1400 mm. Most chassis are designed for rules allowing a 1400 mm rear track. Therefore, it is important to set the kart's rear track to the maximum that the rules allow. It becomes necessary to narrow the track when the rear of the kart has too much grip.

(one without a differential). Making adjustments to enable the race kart to turn without oversteer or understeer is difficult and challenging. Achieving a well-balanced chassis set up is part art and part science. Kart racing chassis are designed in a manner to allow it to turn the only way it can, without having a

Every racer should create/use a setup sheet. But one sheet for all would probably be too complicated. My suggestion is to use check boxes as often as possible to save time writing. The biggest thing is to use the setup sheet on every session. Tip: In a hurry, mark down only the things that were changed since the last session on the track.
