

### types of hypertonic solutions pdf

in theory, d51/2ns is a hypertonic solution also. the only commonly-used intravenous solution containing dextrose that is considered isotonic is d5 1/4 ns (~320 mosm). solutions containing dextrose are somewhat tricky, however. once infused, the dextrose is also immediately metabolized (within 5 minutes of entering the bloodstream) and you are left with the osmolarity effect of the underlying ...

### Help Hypotonic, Isotonic, & Hypertonic Solutions | allnurses

Hypertonic saline, when delivered to the airway surfaces, promotes through its osmotic properties, the movement of fluids from the mucosa region, making it less viscous (viscoelasticity), and helping patients expectorate the excess mucus.

### Frequently Asked Questions :: PharmaCaribe

Saline, also known as saline solution, is a mixture of sodium chloride in water and has a number of uses in medicine. Applied to the affected area it is used to clean wounds, help remove contact lenses, and help with dry eyes. By injection into a vein it is used to treat dehydration such as from gastroenteritis and diabetic ketoacidosis. It is also used to dilute other medications to be given ...

### Saline (medicine) - Wikipedia

Intravenous sugar solution, also known as dextrose solution, is a mixture of dextrose (glucose) and water. It is used to treat low blood sugar or water loss without electrolyte loss. Water loss without electrolyte loss may occur in fever, hyperthyroidism, high blood calcium, or diabetes insipidus. It is also used in the treatment of high blood potassium, diabetic ketoacidosis, and as part of ...

Watery diarrhoea results from disordered water and electrolyte transport in the small intestine. Intestinal transport mechanisms are also the basis for the management of diarrhoea, through oral fluid therapy and feeding. It is therefore important to understand some of the normal mechanisms of intestinal transport and how they are altered during diarrhoea.

What is extravasation? In a general sense, extravasation refers to the process by which one substance (e.g., fluid, drug) leaks into the surrounding tissue.<sup>1</sup> In terms of cancer therapy, extravasation is defined as the accidental leakage from its intended compartment (the vein) into the surrounding tissue.<sup>2</sup> Usually, this occurs when intravenous (IV) medication passes from the blood vessel into the
