Vitamin C, also known as ascorbic acid and L-ascorbic acid, is a vitamin found in food and used as a dietary supplement. The disease scurvy is prevented and treated with vitamin C-containing foods or dietary supplements. Evidence does not support use in the general population for the prevention of the common cold. There is, however, some evidence that regular use may shorten the length of colds.

High-performance liquid chromatography (HPLC; formerly referred to as high-pressure liquid chromatography) is a technique in analytical chemistry used to separate, identify, and quantify each component in a mixture. It relies on pumps to pass a pressurized liquid solvent containing the sample mixture through a column filled with a solid adsorbent material.

Screening for Vitamin C in the Urine: Is it Clinically

This chapter focuses on high performance liquid chromatography (HPLC), which is an instrumental analytical method that gained increased acceptance mainly because it met two basic factors: (1) the need for a wide range of rapid analyses for nutrients, and (2) the need for methods that can be easily automated.

Chapter 2 High performance liquid chromatography (HPLC)

Vitamin B 1 refers to a group of compounds that include thiamin and its phosphate esters: thiamine monophosphate (TMP), thiamine pyrophosphate (TPP), and thiamine triphosphate. 1-5 All living organisms require thiamine, but it is only synthesized by bacteria, fungi, and plants. Thus, thiamine is an essential nutrient for animals that must obtain it from their diets.

Cholecalciferol is a steroid hormone produced in the skin when exposed to ultraviolet light or obtained from dietary sources. The active form of cholecalciferol, 1,25-dihydroxycholecalciferol plays an important role in maintaining blood calcium and phosphorus levels and mineralization of bone. The activated form of cholecalciferol binds to vitamin D receptors and modulates gene expression.
